

I have been subscribing to XM for 2 years now and I love it! While the instant traffic/weather does not cover my area yet I eagerly await it. My whole reason for getting XM was because I am really frustrated by broadcast radio. If you could get in your car, turn on the radio and instantly hear whats going on with roads you have to travel on your commute or get your local forecast, would you not take that option?? No commercials, no DJ yapping away, it's the best!! Please reject petition 04-160, the NAB knows XM has them beat so instead of trying to improve their service they are "crying to mommy."
